The world and art of the organ covers a lot of ground. The first organ may have come into being 2000 years ago, and the oldest existing organ is 450 years old . The basic technology employed in today's best instruments was mature 250 years ago. Many different nations and cultures have spawned organs and organ literature since the renaissance; the instruments and their literature differ from each other as drastically as the times and peoples who produced them. While the 17 Century justifiably represents some of the best known organ literature, it is only the tip of a huge iceberg. --- kith.org
