## Trim MP3 2.4.3

Is there a hidden track that makes your player go through a few minutes of silence? FreeTrim MP3 is a great help for this as it helps remove the unwanted parts of your audio files. It is a free MP3 trimmer that trims MP3/WMA/WAV/OGG sound piece from big audio format files directly. With this free MP3 trimmer, you can select your trim in-point and out-point and save it as a new audio file with the same audio quality as the original. You may also add a smooth fade-in & fade-out and some other cool effects to your new file. With the zoomable waveform, you can visually select the desired part and edit your audio files. You can drag-and-drop audio files simply and pre-listen the songs with a built-in player. It is easy to use and you don't need to be experienced in audio trimming.

FreeTrim MP3 helps you trim MP3 and other audio files to delete the unwanted part. You can cut large MP3 files into smaller parts by setting the start & end frames and convert audio files to MP3, WMA, WAV & OGG format with high speed and output quality. You also can directly load audio CD to input the audio track and rip it as an audio CD ripper. Fade-in/out, echo and some other audio effects are provided to you to add audio effects. You are allowed to select well-configured presets to adjust the quality for every output format and select audio segment precisely to the millisecond. Process with unmatched speed - multi-core processor supported. It helps you operate easily with the snappy interface. Our FreeTrim MP3 can meet all your needs and is totally free. With this powerful software, you can input the most popular formats, including WMA, WAV, MP3, MP2, MPGA, CDA (CD Audio Tracks), OGG, RAW, VOX, G721, G723, G726, AIF, AIFF, AIFC & MPC to cut and save them to a specific format with unmatched speed & lossless quality. You can add audio effects to create beautiful music by adding fade-in & fade-out, adding echo, increasing & decreasing the volume and mixing the files together.
